

# WHY SHOULD YOU GET THE COVID-19 VACCINE?

**ANYONE THAT MEETS THE QUALIFICATIONS BY GROUP OR AGE IS ELIGIBLE AND SHOULD GET THE VACCINE!**

## BUT WHY?

COVID-19 is a severe illness that can cause devastating results. In the U.S cases total 29,769,325. Deaths from this virus amount to 541,289. However, three companies have invented a vaccine to help protect against COVID and hopefully stop the global outbreak.

## GET THE VACCINE FOR PROTECTION!

The **COVID-19 vaccine** is administered so your body can better protect you against the illness. When you receive the anti-bodies, your immune system **BUILDS RESISTANCE** to the illness **WITHOUT** you getting sick. You are **FULLY** vaccinated 2 weeks after a second-dose or after you receive your dose from J&J. When you are fully vaccinated, you can **START** doing some things that have been **STOPPED** for the pandemic, such as gathering indoor **WITHOUT YOUR MASK** with fully vaccinated people and visit with relatives unless they have an increased risk or have been exposed to **COVID**, and you do not need to get tested unless you exhibit symptoms.

Thus the potential benefits outweigh that of simply not getting the vaccine.

## PREVENT LIFE-THREATENING COMPLICATIONS FROM COVID-19!

- COVID-19 symptoms include..
- Fever and chills
- Cough and runny nose
- Fatigue
- Newly loss of taste
- Trouble breathing
- Confusion
- Pain and pressure in the chest
- Pale, grey, and blue-colored skin, lips, or nail beds.

**\*Vaccine side effects- site of injection: pain, redness, and swelling;  
throughout the body- tiredness, headache, muscle pain, chills, and fever,  
nausea**

**These side effects are well worth feeling bad if you can achieve protection!\***

## "I DON'T WANT THE VACCINE, I'LL JUST WAIT FOR HERD IMMUNITY !"

Don't just say you are going to be apart of the herd immunity... especially if you are at risk due to health conditions, age, or job conditions. Chances are if you say you are waiting for herd immunity, so is everyone else around; why not **be a leader** and actively raise the percentage to achieve herd immunity faster! Also, don't not get the vaccine because you don't want to, there are other people who medically have a reason they can't get the vaccine; let herd immunity cover them.

## YOU CAN GET THE VACCINE YOU MOST IDENTIFY WITH!

- **Pfizer**
  - two shots separated by 21 days
  - 16 years or older
  - 95% efficiency rate
- **Moderna**
  - two shots separated by 28 days
  - 18 years or older
  - 94.1% efficiency rate
- **Johnson and Johnson**
  - one-shot dose
  - 66.3% efficiency rate
